

Confess Celebration Pages – Feature Specification

1. Overview

The **Celebration Page** feature allows users to create personalized celebration microsites for loved ones. These pages can be used for occasions such as birthdays, anniversaries, graduations, proposals, and more.

Each celebration page will have:

- A custom URL
- Recipient name
- Occasion type
- Images
- Optional background music
- Payment-based add-ons

Example URLs:

- confess.com.ng/madeforinioluwa
- confess.com.ng/happybirthdaytodemilade
- confess.com.ng/congratsfolake

2. Core Features

2.1 Custom URL Slug

Users can **choose their own URL slug** instead of a random one.

Example:

confess.com.ng/{slug}

Example slugs:

- `madeforinioluwa`
- `happybirthdaytodemilade`
- `foreverwithade`

Rules

- Must be **unique**
- Lowercase only
- No spaces
- Hyphen allowed
- 3 – 40 characters

Backend must validate uniqueness before creation.

Celebration Page Data Structure

Each celebration page will contain:

Field	Type	Description
id	UUID	Unique page identifier
slug	string	Custom URL slug

recipient_name	string	Name of the person being celebrated
occasion_type	enum	Type of celebration
images	string[]	Uploaded image URLs
music_type	enum	<code>none</code> , <code>app_music</code> , <code>custom_music</code>
music_url	string	Music file URL
created_by	UUID	User ID
total_price	number	Total calculated price
payment_statuses	enum	<code>pending</code> , <code>paid</code> , <code>failed</code>
created_at	datetime	Creation timestamp

. Occasion Types

The user must choose one celebration category.

Supported values:

birthday

anniversary

proposal

graduation

valentine

appreciation

custom

This can be stored as an **ENUM**.

5. Pricing Model

5.1 Base Package

Base price includes:

- Up to **3 images**

Price:

₦1,000

5.2 Extra Images

If user uploads more than 3 images:

₦500 per extra image

Example:

Image s	Price
------------	-------

3	₦1,000
---	--------

4 ₦1,500

5 ₦2,000

6 ₦2,500

Formula:

$\text{base_price} = 1000$

if images > 3:

$\text{extra_images} = \text{images} - 3$

$\text{extra_cost} = \text{extra_images} * 500$

5.3 Music Options

Option 1: No Music

Free

Option 2: App Music

User selects music from a list provided by the application.

Price:

₦200

Music files will be stored and served by the platform.

Example:

- romantic_theme.mp3

- birthday_song.mp3
 - celebration_theme.mp3
-

Option 3: Custom Music Upload

User uploads their own audio.

Price:

₦500

Backend must support **audio file upload**.

6. Total Price Calculation

The total price is calculated based on:

total_price =

base_package +

extra_images +

music_option

Example scenarios:

Example 1

Images: 3

Music: None

₦1,000

Example 2

Images: 5

Music: App music

Base = 1000

Extra images = $2 * 500 = 1000$

Music = 200

Total = 2200

Example 3

Images: 6

Music: Custom music

Base = 1000

Extra images = $3 * 500 = 1500$

Music = 500

Total = 3000

7. Celebration Page Flow

Step 1 — User Inputs Details

User provides:

- Recipient name
- Occasion type
- Custom slug
- Upload images

Backend validates:

- slug availability
- image count

Step 2 — Music Selection

User chooses:

- No music
- App music
- Custom music upload

Step 3 — Price Calculation

Backend calculates total price.

Frontend displays summary.

Step 4 — Payment

User completes payment (Paystack).

Payment metadata should include:

page_id

slug

user_id

total_price

Step 5 — Activation

After successful payment:

payment_status = paid

Page becomes publicly accessible.

Example:

confess.com.ng/madeforinioluwa

8. Suggested API Endpoints
